company profile

Dekorform is a business to business company that manufactures profile wrapped products for a variety of industries Australia wide.

Profiles are custom made to suit individual customer requirements and are manufactured with a comprehensive variety of designs and finishes.

Quality raw materials are sourced from local and global markets ensuring the finished products meet the exacting standards demanded by our customers.

We work with our customers in delivering value added and cost-effective solutions to meet their specific briefs.

Australia's leading manufacturers of Furniture, Caravans, Caskets, Kitchens, Flooring and Interior Building products all use products manufactured by Dekorform.

profile wrapping

Profile wrapping is the process of laminating a decorative overlay to a substrate in a lineal process. Overlay options include the natural beauty of Real Timber Veneer as well as Decorative Papers & PVC films in a choice of solid colours, abstracts or woodgrain finishes. Various substrates include MDF, Finger Jointed Pine, Aluminium and Plastic extrusions.

The use of Profile Wrapped Mouldings provides the consistency required to meet the demands of high volume detailed production. Once wrapped the profiles are finished with no painting required.

history

Dekorform is a privately owned family business with an exceptionally strong background in manufacturing. Established in 1980 Dekorform pioneered the Profile Wrapping process in Australia. Today Dekorform employs a highly skilful team and operates four profile moulders and six profile wrapping lines.

For over 30 years Dekorform has developed a reputation for high quality products and personalised service.

Make your point of difference with Dekorform.

environmental

Dekorform is committed to an eco-friendly and sustainable environment. Our decisions are made with minimal negative impact on our environment. It is an intrinsic part of the way we do business daily.

Our Customwood® is sourced from managed and renewable plantation pine and is Australian Forestry Standard chain of custody certified. Finger Jointed Pine is sourced from sustainable forests and is a recovered waste product by its very nature.

We manage waste responsibly through numerous recycling programs including aluminium and metals, used oils and timber waste. We subscribe to local government environmental initiatives and voluntary audits as well as our own internal Energy and Carbon Management Policy (ECM), which aligns with the Australian Government's Energy Efficiency Opportunities (EEO) program.

Value add to your business with Dekorform

flooring

The flooring segment has value added their offer by wrapping aluminium profiles to match existing floor colours to provide a continuous look finished to the highest quality. Scotia and skirting profiles also compliment the floor colour or can be supplied in a solid white.

building

Decorative acoustic battens are the perfect way to provide acoustic absorption. Unlike solid timber which could resonate, these battens are made from MDF. The homogeneous and stable structure of MDF makes it an excellent acoustic materials solution. The battens can be assembled on ceilings, as wall panelling or as screening. The battens are also used for decorative visual features.

T-moulds in suspended ceilings are wrapped to match the decorative acoustic panel inlay. The moulds can also be wrapped in a contrasting colour to add effect.

Wrapped door jambs and skirtings are supplied as a finished product and do not require painting.

furniture

Furniture segments rely on Dekorform for the variety of moulds and finishes we supply for their specific niche requirements. We match colours and surfaces to their existing products, and our woodgrain looks are a low cost solution to real timber products which allow our customers to compete with the challenge of imports.

caravan

With our close supplier relationships we are able to work together with our customers and wrap dekorform profiles exactly matched to our customers' doors and panels. Profiles can have traditional soft curves or modern sharp lines and once wrapped provide a seamless look consistent with the fit out. Extrusions can also be part of an efficient construction method.

There is a huge array of possibilities, contact us to discuss your ideas today.
